

# iLOQ Privus The Key to Security

iLOQ Privus is an innovative and high-security locking solution for autonomous management of key access to homes, small businesses and recreational properties.

## Why to use iLOQ Privus?

### Easy autonomous key management:

iLOQ Privus enables you having full control of access rights. With iLOQ Privus you can:

- add new keys in 5 seconds
- eliminate keys in 5 seconds
- eliminate lost keys simply by resetting

iLOQ Privus sets you free of having different keys to each property. But it allows you to decide which key opens which door. For example, to keep your children safe you can allow access to garage or toolset for only adults in your family. You can even provide temporary keys for guests - just add keys when necessary and re-

move them after holiday season. There are numerous ways you can benefit from flexible iLOQ Privus.

## Easy system expansion to other objects

iLOQ Privus enables you to expand your locking system with new locks and keys meeting your future needs. Once you have iLOQ Privus at your home you can use the same key(s) to access e.g. recreational properties or your small business office. You can add additional locks and up to 32 keys to secure all places important to you.

## Easy installation and usage

iLOQ Privus is incredibly easy to install and to use. iLOQ Privus is based on unique, award winning technology with self-powered iLOQ lock cylinders harvesting energy from the movement of the key insertion. There is no need for expensive cablework or inconvenient batteries. Simply replace the existing cylinder with the iLOQ cylinder.

## High security

iLOQ Privus is a digitally encrypted high-security locking system. All locks and keys in iLOQ Privus system are mechanically alike. Access data is secured with powerful encryption and therefore can not be copied. Mechanical and electronic strength of iLOQ Private are compliant with international standards.

## How to get started?

iLOQ Privus locking system consists of lock cylinders, user keys and a pair of programming keys. iLOQ Privus will be available via iLOQ Partners and iLOQ webshop from March 2010. In the beginning iLOQ Privus can be shipped with Scandinavian oval iLOQ cylinders. Later this year iLOQ Privus will be available with Europrofile DIN cylinder versions.
